

Normalize Homocysteine

TRI-B[®] *Three B-Vitamins*

Research indicates that the three B-vitamins in TRI-B help maintain normal blood levels of HOMOCYSTEINE, which play an important role in maintaining healthy arteries to promote heart health.

HOW THE THREE B-VITAMINS WORK:

"Plasma homocysteine concentration relates inversely to blood levels of folate, cobalamin, and pyridoxine and to intakes of these vitamins."

Journal of the American Medical Association
277:22, 1997, 1780

"Adequate levels of all 3 vitamins may be needed to obtain an optimal homocysteine concentration."

Journal of the American Medical Association
270:22, 1993, 2698

"Simple and inexpensive therapy with vitamin B6 plus folic acid will normalize homocysteine metabolism, as assessed by the homocysteine plasma level after methionine loading in virtually all these patients."

Journal of Vascular Surgery, 20:6, 1994, 933-940

3 Metabolic Co-Enzymes

Code Quantity

2001 120 Tablets

2003 360 Tablets

Each Tri-B tablet contains:

Vitamin B-12 (Cyanocobalamin) 400 mcg

Vitamin B-6 (Pyridoxine HCl) 25 mg

Folate (Folic Acid) 800 mcg
